perplexity

🔧 FIX: Drizzle ORM `.returning()` Error

MySQL Drizzle doesn't support `.returning()` - it's PostgreSQL only![^1]

QUICK BACKEND FIX

Update `server/controllers/adminCourseController.ts` - Replace ALL `.returning()` calls:

1. Fix `adminUpdateCourse` (around line 276):

```
// WRONG (MySQL doesn't support this):
const [updatedCourse] = await db
  .update(courses)
  .set({ ... })
  .where(eq(courses.id, id))
  .returning();  // ❌ DELETE THIS LINE

// CORRECT:
await db
  .update(courses)
  .set({
    title, description, thumbnail, category, level, duration, language,
    originalPrice: Number(originalPrice),
    discountPrice: discountPrice ? Number(discountPrice) : null,
    isFree: Boolean(isFree),
    isPublished: Boolean(isPublished),
    isFeatured: Boolean(isFeatured),
    totalLessons: Number(totalLessons),
    syllabus, features, requirements,
    updatedAt: new Date(),
  })
  .where(eq(courses.id, id));

// REFETCH the updated course
const [updatedCourse] = await db
  .select()
  .from(courses)
  .where(eq(courses.id, id));
```

2. Fix `adminDeleteCourse` (no change needed - already correct)

3. Fix `togglePublish` (around line 396):

```
// WRONG:
const [updatedCourse] = await db
  .update(courses)
  .set({ isPublished: newStatus, updatedAt: new Date() })
  .where(eq(courses.id, id))
  .returning();  // ✕ DELETE THIS LINE

// CORRECT:
await db
  .update(courses)
  .set({
    isPublished: newStatus,
    updatedAt: new Date(),
  })
  .where(eq(courses.id, id));

// REFETCH updated course
const [updatedCourse] = await db
  .select()
  .from(courses)
  .where(eq(courses.id, id));
```

4. Fix `adminCreateCourse` (already correct - uses `returning()` properly)

COMPLETE FIXED `adminCourseController.ts` Functions:

```
// REPLACE these 2 functions in adminCourseController.ts:

export const adminUpdateCourse = async (req: RequestWithUser, res: Response) => {
  try

<div align="center">⁂</div>
