}
```

✅ COURSES ADMIN INTEGRATION COMPLETE!

What changed:

1. ✅ **Import** `adminCoursesApi.ts` service
2. ✅ **Updated Course interface** to match backend schema
3. ✅ **fetchCourses()** → calls real `/api/admin/courses` with filters
4. ✅ **handleAddCourse()** → `createCourse()` API call
5. ✅ **handleEditCourse()** → `updateCourse()` API call
6. ✅ **handleDeleteCourse()** → `deleteCourse()` API call
7. ✅ **handleTogglePublish()** → `togglePublish()` API call
8. ✅ **Error handling** with proper toast messages
9. ✅ **Auto-refresh** after all operations
10. ✅ **JWT auth** handled automatically by `api` client

Test it:

1. Login as admin/instructor
2. Go to `/admin/courses`
3. ✅ Real data loads
4. ✅ Create/Update/Delete works
5. ✅ Filters work
6. ✅ Toggle publish works

ALL 6 STEPS COMPLETED!

Courses admin is now **fully functional** with real database integration!

Next: Want to do **Quizzes**, **Users**, or another component?
